Nationality	Spanish
Date of birth	November 03, 1994 (23 years old)
Gender	Male

+ EXPERIENCES

03 Apr 2017-03 Jul 2017 Internships in Coritel PTA Malaga	I developed a web application in order to improve the user experience when communicating with a database. The problem was that when we wanted to retrieve information from the database we had to do it through the console and the retrieved information was almost illegible. With this application you can see this information in a table with multiples options. I used technologies like java, javascript, struts, html, css, jquery .etc

+ EDUCATION

2017	**Cambridge English Preliminary** Futura Idiomas, Malaga
17 Oct 2016 – 12 Dic 2016	**Course "New trends in design and develop of applications with java technologies"** University of Malaga
2012 - 2017	**Mathematics degree** University of Malaga
2017-Current	**Master in Advanced Analytics on Big Data** University of Malaga
Nov 2017 - Current	**Cambridge English First** CESTEATINOS. Centro de Estudios Teatinos

+ LANGUAGES

Mother tongue	Spanish
Foreign languages	English

+ IT SKILLS

Java	Both in the course of Java and in the internship I worked with Java. I have used frameworks like Struts and Spring.
Python	I have worked with python in the mathematics degree and in the master of Data Analytics. In the machine learning field I have worked with the Scikit-learn library and Spark Mllib. I have also worked with the Apache Spark streaming library. In the last year of the degree I've worked with other two classmates in the simulation of a spread of forest fire.
Scala	I studied Scala in the first year of the degree. I have also worked with Apache Spark in Scala in the master.
Haskell	I studied Scala in the first year of the degree.

Databases	I have worked with mongoDB, Cassandra, Hive and MySql
JavaScript	I have worked with Node.js, some works I have done are available in: https://github.com/jaimemat17

+ INTERESTS

I have been an active member of the board of Science students. I have also been a representative of the University of Malaga in two National Assemblies of Students Of Mathematics.

As a future IT professional I would like to continue learning and growing. I would like to have the possibility of learn new skills and work in fields that I like.

My first idea is to grow as a datascientist. I am also interested in Artificial Intelligence and Internet of things. I have no problem learning new programming languages or working with new technologies. In the Big Data master I have learnt easily and faster to work with new technologies even doing some challenges.

As a mathematician I like to face problems and go inside them in order to find the best solution.

I also like to be self-taught. I have no problem in looking for information on internet or books.
